Intelligent Lockers

Enhancing the logistics associated with package delivery

WHAT IT IS:

Exela's Intelligent Lockers are a multi-purpose, electronic, delivery system that provides visitors and employees with a convenient and secure space to trade, receive and store goods and packages. The intuitive touchscreen interface prompts users through the pick-up and drop-off processes Email and/or SMS alerts keep users informed of any activity regarding the logistics behind the package delivery and pick-up location. All transactions are recorded and can be recalled from your management system for asset protection.
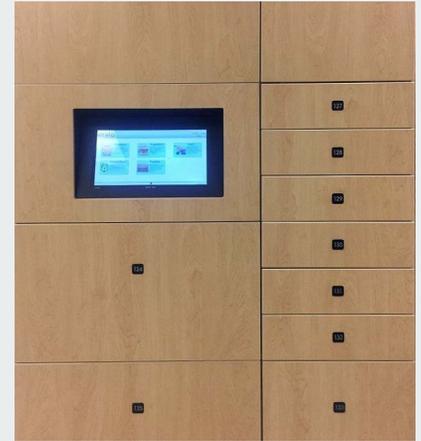

WHAT IT DOES:

The intelligent lockers automate delivery services for its clients, enhancing the logistics associated with package delivery. Lockers offer employees, customers, students and faculty increased flexibility to pick up their packages, while keeping them secure and eliminating redelivery attempts.

- Provides 24|7|365 accessibility for secure and convenient package receipt
- Eliminates the need for a receiving room or reception area clutter
- Includes high tech options such as RFID, QR Code access, etc.
- Provides end-to-end chain of custody and automation of the delivery process
- Facilitates customizable workflows to meet specific organizational needs
- Features state-of-the-art, proprietary digital locking technology for secure package delivery
- Offers locker banks that can run as standalone kiosks or network modules in variable sizes for customizable configuration(s)

HOW IT WORKS:

Intelligent Lockers work in four simple steps:

1. A package recipient (employee, customer or student) orders a package to be delivered to their location.

2. The package is received in the mailroom and delivered to the Intelligent Locker. It is placed inside a locker that is assigned by the Lockers management system, through a built-in touch screen. Once the package is in the locker, a delivery alert is queued.

3. The recipient receives the alert, via text or email, that their package has arrived and is ready for pickup at the Intelligent Lockers. The message contains a unique code which is entered on the Intelligent Locker touch-screen. The system then opens the designated locker containing the package.

4. The recipient now has access to their package.

BENEFITS

- ☑ Complete end to end security of packages and elimination of risk of lost packages

- ☑ Increased flexibility for recipient

- ☑ Increased security

- ☑ 24x7 access

- ☑ Reduce the need for staff deliveries

- ☑ Chain of custody tracking

- ☑ Eliminates redelivery attempts

- ☑ End-to-end chain of custody so management can review every package pick-up and drop-off

- ☑ Eliminates the need for signature logs, all package deliveries are logged electronically

Embracing complexity. Delivering simplicity.
